

Fund Counterparty Statistics

The Global Capital Allocation Project

January 2024, Beta Version

This README file provides documentation for the file “Fund Counterparty Statistics” (available in .xlsx and .dta formats), which contains data on the geography of holders of mutual fund shares in Ireland and Luxembourg on an immediate counterparty basis. The underlying data are from the Central Bank of Ireland and the Commission de Surveillance du Secteur Financier (CSSF) of Luxembourg. The estimates are aggregated from the respective statistical offices starting from micro data at the fund level. We further aggregated the data to country or region of holder. We provide these estimates in support of our paper, Beck, Coppola, Lewis, Maggiori, Schmitz, and Schreger (2024). We refer readers to the paper for full details on the data. We request that users of these data acknowledge their source and recommend inclusion of the following sentence:

“These data are based on the work in Beck et al. (2024) and were obtained from:
www.globalcapitalallocation.com.”

The downloadable files include:

- Holders_of_IRL_and_LUX_Fund_Shares_by_Counterparty_Country.dta
- Holders_of_IRL_and_LUX_Fund_Shares_by_Counterparty_Country.xlsx
- Holders_of_LUX_Fund_Shares_by_Counterparty_Region.dta
- Holders_of_LUX_Fund_Shares_by_Counterparty_Region.xlsx
- Counterparty_to_Counterparty_Region_Mapping.dta
- Counterparty_to_Counterparty_Region_Mapping.xlsx

These files provide two breakdowns and a mapping between the two:

1. **Counterparty country** provides a shorter time series of the holders of shares in mutual funds resident in Ireland and Luxembourg on an immediate counterparty basis broken down by the country of the counterparty.

2. **Counterparty region** provides a longer time series of the holders of shares in mutual funds resident in Luxembourg on an immediate counterparty basis broken down by the region of the counterparty (which is more aggregated than the individual country-level reporting in the prior file).
3. **Counterparty country to counterparty region** provides a details on how counterparty countries with positions in Luxembourg fund shares are grouped into regions.

Amounts are in EUR billions. We note below the variables contained in each file below.

1 Positions by counterparty country

Holders_of_IRL_and_LUX_Fund_Shares_by_Counterparty_Country has the following fields:

1. year – Positions are measured at the end of December of this year.
2. counterparty – Country which holds the position on an immediate counterparty basis. Formatted as a 3-character ISO code.
3. holdings_of_irl_funds – Value of the positions in shares of mutual fund resident in Ireland.
4. holdings_of_lux_funds – Value of the positions in shares of mutual funds resident in Luxembourg.

2 Positions by counterparty region

Holders_of_LUX_Fund_Shares_by_Counterparty_Region file has the following fields:

1. year – Positions are measured at the end of December of this year.
2. counterparty_region – Region of the country which holds the position on an immediate counterparty basis.
3. holdings_of_lux_funds – Value of the positions in shares of mutual funds resident in Luxembourg.

3 Counterparty to counterparty region mapping

Counterparty_to_Counterparty_Region_Mapping file has the following fields:

1. counterparty – Counterparty country. Formatted as a 3-character ISO code.
2. counterparty_name – Counterparty country name.
3. counterparty_region – Region the counterparty country is included in.

4 Details on the Data

Region aggregation. For the data on positions by counterparty region: these regions are mutually exclusive (and collectively exhaustive). If a region corresponds exactly to a country we format the country name as a 3-character ISO code. This is the case for CHE, GBR, JPN, LUX, and USA. The remaining codes correspond to regions. The code REA corresponds to the Rest of Euro Area, here meaning all Euro Area countries except for LUX. “Europe ex. EA” corresponds to all European countries outside of the Euro Area. Small offshore center corresponds to offshore financial centers. “Asia ex. JPN” corresponds to all Asian countries except JPN. Finally ROW is a residual category containing all countries not in one of the other regions.

Time series coverage. The breakdown of counterparties by country is available for different lengths of time for Ireland and Luxembourg. The Ireland data is available for 2014 to 2022, while the Luxembourg data is available from 2016 to 2021. We report missing values for years when Luxembourg data is not available. The breakdown by counterparty region for Luxembourg is available for a longer time period: 1998 to 2021.

Missing values. Where a counterparty country does not appear in one of the datasets, we leave the position value as missing for that observation. Where a country appears but has no reported holdings, we report a 0 for that country. For some years, Luxembourg data is not available by country. We also report missing values for Luxembourg for those years.

Differences between country and region versions. There may be slight differences between the total positions in the country and region versions of the data. The data were accessed at different times and the differences are not substantial.
